IN THE CLAIMS:

Please amend the claims as follows:

1. (Original) A method of accessing information on a computer network on a communication device, the device being capable of communicating with a first communications network and receiving a signal from a second communications network, the method comprising:

receiving, via the second network, unsolicited information from the computer network, wherein the information contains an identifier identifying further information on the computer network;

requesting, via the first network, further information from the computer network, wherein the further information is based on the received identifier; and

receiving the further information via one of the first or second networks.

- 2. (Original) The method of claim 1, wherein the second communications network is a broadcast network, and wherein the step of receiving via the second network is adapted for receiving via the broadcast network.
- 3. (Original) The method of claim 1 or 2, wherein the first communications network is a telecommunications network, and wherein the step of receiving the further information is adapted for receiving the further information via the telecommunications network.
- 4. (Original) The method of claim 1 or 2, wherein the step of receiving the further information is adapted for receiving the further information via the broadcast network.
- 5. (Currently Amended) The method of claim 1, or 2, 3 or 4, wherein the unsolicited information contains a content identifier, further comprising storing, on the device, a list of content identifiers of interest.

- 6. (Original) The method of claim 5, further comprising filtering the received unsolicited information to remove any information not having a content identifier in the list of content identifiers.
- 7. (Currently Amended) The method of any preceding claim 1 or 2, wherein the second communication network is digital video broadcast terrestrial (DVB-T) network, and wherein the steps of receiving via the second network are adapted for receiving via the DVB-T network.
- 8. (Currently Amended) The method of any preceding claims 1 or 2, wherein the first communication network is a cellular network, and wherein the step of receiving via the further information is adapted to receive via the cellular network.
- 9. (Currently Amended) A communication device for accessing information on a computer network, the device capable of communicating with a first communications network and receiving a signal from a second communications network, the device comprising:
- a receiver for receiving, via the second network, unsolicited information from the computer network, wherein the information contains an identifier identifying further information on the computer network; and
- a transceiver for requesting, via the first network, further information from the computer network, wherein the further information is based on the received identifier.
- 10. (Currently Amended) The device of claim 9, wherein <u>the</u> transceiver is adapted to receive the further information via the first network.
- 11. (Original) The device of claim 9, wherein the receiver is adapted to receive the further information via the second network.

3

- 12. (Original) The device of claim 9, 10 or 11, wherein the second communications network is a broadcast network, and wherein the receiver is adapted to receive the unsolicited information via the broadcast network.
- 13. (Currently Amended) The device of claim 9, 10, or 11-or-12, wherein the first communication network is a telecommunications network, and wherein the transceiver is adapted for use with the telecommunications network.
- 14. (Currently Amended) The device of any of claims 9, 10, or 11, to 13 wherein the unsolicited information contains a content identifier, and further comprising a memory for storing, on the device, a list of content identifiers of interest.
- 15. (Original) The device of claim 14, further comprising a filter for filtering the received unsolicited information to remove any information not having a content identifier in the list of content identifiers.
- 16. (Currently Amended) The device of any-of-claims 9, 10, or 11-to-15, wherein the second communication network is digital video broadcast terrestrial (DVB-T) network, and wherein the receiver is adapted to receive via the DVB-T network.
- 17. (Currently Amended) The device of any of claims 9, 10, or 11 to 16, wherein the first communication network is a cellular network, and wherein the transceiver is adapted for use with the cellular network.
- 18. (Currently Amended) The device of any of claims 9, 10, or 11-to 17, wherein the communication device is a portable communication device.
- 19. (Currently Amended) A system for accessing information on a computer network using a device as claimed in any one of claims 9, 10, or 11-to-18.

Aaltonen -- Serial No. 10/074,238 Responsive to 3/9/05 office action

- 20. (Currently Amended) The system of any of claims 9, 10, or 11 to 19, further comprising a database of user profiles for storing a list of information categories determined to be of interest to the users.
- 21. (Original) The system of claim 20, further comprising a broadcast transmitter for transmitting information from the computer network to users determined to be interested in the information.
- 22. (Currently Amended) A method of distributing information using the system of-any of claims 19-to-21.
- 23. (Currently Amended) A method of distributing information for use with the device of any of claims 9-to-18.

Claims 24-26. (Canceled).
